When to use autopilot?

Quick guide

When to use autopilot?

Never use Autopilot!

When to use autopilot?

Thank you!

But seriously?

- Use autopilot ONLY when you fully understand the risk!

- Autopilot makes you more vulnerable, but saves important resource – time

- Valid use cases for me:
  - Shuttling in HiSec
  - Empty hauler
  - Fully passive, slow aligning ships
  - Switching on Autopilot after initiating warp to InstaDock bookmark

- You might get killed – use it only when you're 100% sure the risk is acceptable
