

# When to use autopilot?

---

Quick guide

# When to use autopilot?

---

# Never use Autopilot!

# When to use autopilot?

---

# Thank you!

# But seriously?

---

- Use autopilot ONLY when you fully understand the risk!
- Autopilot makes you more vulnerable, but saves important resource – time
- Valid use cases for me:
  - Shuttling in HiSec
  - Empty hauler
  - Fully passive, slow aligning ships
- You might get killed – use it only when you're 100% sure the risk is acceptable
